Asciidoctor

Asciidoctor is a **publishing toolchain** for the AsciiDoc writing format.

Written in **Ruby** (and transpiled to **JavaScript**)
(can be used with JRuby in the **JVM**)

Open Source (MIT Licence)

AsciiDoc example

= Getting Started with Java
Author Name <author@example.org>

== Hello World example

Copy the `*HelloWorld.java*` file.

TIP: The application prints `_Hello World!_` to the console.

- * Compile this source to a class file using ``javac``.
- * Run the compiled class file using ``java``.

If you need help with the Java syntax check the
link:[http://docs.oracle.com/javase/8/docs/\[Java 8 Javadoc\]](http://docs.oracle.com/javase/8/docs/[Java 8 Javadoc]).

Headings

= Getting Started with Java

Author Name <author@example.com>

Document Title

== Hello World example

Section Level 1

Copy the *HelloWorld.java

TIP: The application prints _Hello World!_ to the console.

* Compile this source to a class file using `javac`.

* Run the compiled class file using `java`.

If you need help with the Java syntax check the
link:[http://docs.oracle.com/javase/8/docs/\[Java 8 Javadoc\]](http://docs.oracle.com/javase/8/docs/[Java 8 Javadoc]).

Lists

= Getting Started with Java
Author Name <author@example.org>

== Hello World example

Copy the `*HelloWorld.java*` file.

TIP: The application prints `_Hello World!_` to the console.

- * Compile this source to a class file using
- * Run the compiled class file using ``java``.

Unorder list items

If you need help with the Java syntax check the
